
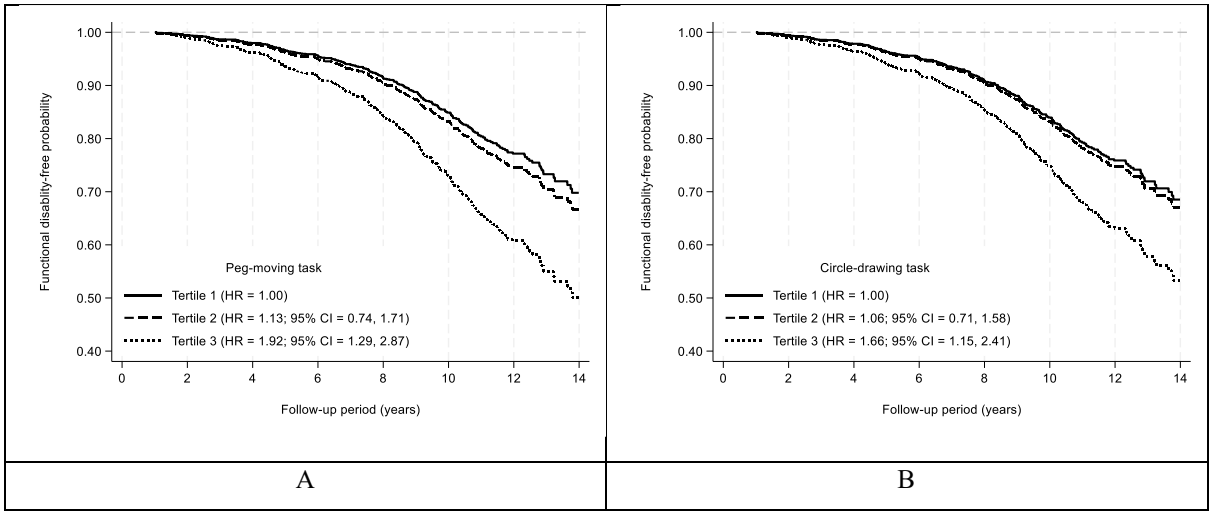

Fig. S3. Adjusted Kaplan–Meier curves for incidence of functional disability by peg-moving (A) and circle-drawing task (B) based on Model 2 of Table 3. Range of peg-moving task is ≤34.49 seconds for tertile 1, 34.50–38.78 seconds for tertile 2, and ≥38.79 seconds for tertile 3. Range of circle-drawing task is ≥27 points for tertile 1, 21–26 points for tertile 2, and ≤20 points for tertile 3. HR, hazard ratio; CI, confidence interval.
