
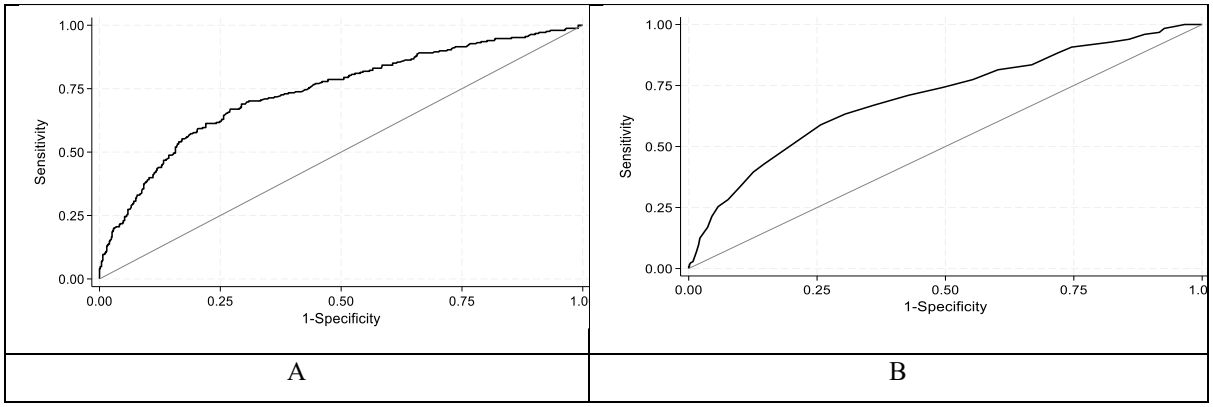

Fig. S4. Receiver operating characteristic curves for predicting functional disability based on (A) peg-moving task and (B) circle-drawing task (n=980). The area under the curves (AUC) were 0.74 for the peg-moving task and 0.70 for the circle-drawing task. The optimal cutoff points were 37.9/38.0 seconds for the peg-moving task and 21/20 points for the circle-drawing task, respectively.
